## What are Multi Systems?

A multi system is ideal when individual units are required in more than one room and when a traditional whole home ducted system may not be suitable due to the homes design.

A multi system can cool or heat multiple rooms, allowing for a variety of up to six indoor units to be connected to just one compact outdoor unit. This means greater installation flexibility and outdoor space saving options.

## Wide Range of Options

Fujitsu General have extended their line-up of R32 products with the launch of the new 3 and 4 rooms multi system outdoor units. The use of R32 refrigerant improves heat transfer and compared to the commonly used R410A refrigerant, has a 67 per cent<sup>1</sup> lower 'Global Warming Potential Factor' whilst still maintaining the performance of the unit. The 3 room outdoor unit has a rated cooling capacity of 6.8kW and the 4 room outdoor unit has a rated cooling capacity of 8.0kW.

## Extensive indoor unit line-up

The range of connectable R32 indoor units on the 3 and 4 rooms multi system has been extended to 21 models across 6 different styles including wall mounted, bulkhead, slimline, mini duct, compact cassette and floor mounted, giving consumers an extensive range to choose from to suit their individual room requirements. The indoor units can be controlled individually via a remote control or simultaneously via a central controller.

## Flexible Installation

Due to the latest design, flexible installation of the outdoor unit is possible even in limited and narrow spaces.
